

Richard Lim

201-820-8219 | richardlim7100@gmail.com | [Web Portfolio](#) | Waldwick, NJ

Career Objective

Accomplished Data Analyst with a background in transforming complex datasets into actionable insights, focusing on financial reporting, predictive modeling, and data visualization. Proven history of using Python, R, SQL, and BI Tools like Tableau and Looker Studio to automate processes and deliver impactful analyses to senior stakeholders.

Education

Villanova University

May 2024

B.S. in Statistics; Minor in Mathematics | Cum Laude

Experience

A360Media – Finance Data Analyst

June 2024 - Present

- Automated the billing process for 50+ partners using Python, reducing manual workload and improving scalability across the team.
- Built interactive Looker Studio dashboards to monitor KPIs across Programmatic Advertising, Affiliate Marketing, and Syndication revenue lines, enabling senior management to make data-driven decisions across 80+ partners.
- Delivered monthly financial reports on Programmatic Advertising, Affiliate Commerce, and Syndication revenue lines to senior management using Excel (Pivot Tables, Power Query, VLOOKUP) and SQL, providing visibility into key revenue trends.
- Collected and consolidated data from Google Analytics/GA4, Google Ad Manager, and multiple supply-side platforms using Python and Excel to support reporting across all revenue lines.

Villanova Baseball – Data Analyst

February 2022 - May 2024

- Contributed to improving the team's record from 3-13-1 to 16-16 by producing data-driven scouting reports on opposing teams' pitching and hitting tendencies.
- Analyzed opponent data using R and custom baseball dashboards, collaborating with fellow analysts to surface actionable insights.
- Presented findings directly to coaching staff, translating complex analyses into clear visualizations to inform in-game strategy.

Colorado Summer Institute in Biostatistics – Fellow

June 2022 - August 2022

- Placed top 5 in a competitive 6-hour hackathon by applying random forest and linear regression models to predict intubation duration, presenting findings to a panel of judges.
- Built a random forest model with an out-of-bag error rate of 3.87% to identify predictors of obesity in American youth using a large-scale dataset.
- Delivered a presentation to a non-technical audience using geospatial visualizations, decision trees, and partial dependence plots to communicate findings clearly.

Projects

Breast Cancer Classification using Neural Networks | Python / [Kaggle](#)

- Developed a Keras Sequential neural network optimized with the Adam optimizer, achieving 96% classification accuracy.

Predicting Survival of Passengers on the Titanic | Python / [Kaggle](#)

- Built an end-to-end data pipeline with exploratory analysis, feature engineering, and a tuned Random Forest model, achieving 83% accuracy.

Skills

Programming: Python (Matplotlib, Seaborn, Sklearn, NumPy, Pandas), R, SQL, Java, HTML

Analytics & Modeling: Neural Networks, Logistic Regressions, Decision Trees, Random Forests, Hypothesis Testing

Tools: Looker Studio, Tableau, Jupyter Notebook, PyCharm, VSCode, Excel (Power Query, VLOOKUP, Pivot Tables)

Languages: Fluency in Korean and English, Elementary Spanish
